

Did you know:

...that you're not getting the most out of your computer?

You may have thought that too, which is why you might be tempted to just throw it out and buy a brand new one. Nobody would blame you.

But hold on – what if you could give your old computer a new lease of life, **for free**?

Interested?

Then read on – what will only cost you a few moments **could save you hundreds of pounds**.

Giving your old computer a 'facelift' could be the answer. **It's good for both you and the environment, so it's win/win for everyone.**

How to Rescue your PC:

Linux is an operating system – as *Windows* is - which is what you need to run programs. The biggest difference between them is that because **Linux** was developed in an Internet environment, **it is much more resilient to hacking and viruses** – which ultimately means that **your personal information is safer**.

One of the reasons that your current computer is slow is because it has to run anti-virus software, which is very demanding of the computer's power. **Linux doesn't get viruses; it doesn't need anti-virus software**; meaning your computer will be as fast as nature intended.

Join millions of others:

Do you want your computer to work as well as the ones that run **Google** and **Facebook**? They're both hugely successful, and it's no coincidence - they both use Linux.

Linux supports the computers of many large governments and corporations. It's used by hundreds of millions of people worldwide.

Millions of people use *Linux* because of how well it works.

So what do I do now?

You can join **Chelmsford's Linux User Group**, which will be full of friendly people waiting to help you transform your tired old Windows PC to a Linux one: for free!

There's the Linked-In group:
<http://www.linkedin.com/groups/Chelmer-Linux-Android-Users-Group-3963756>

And a mailing list at:
<https://mailman.lug.org.uk/mailman/listinfo/chelmer>
